

EDI integration for SMEs – directly into SAP Business One!

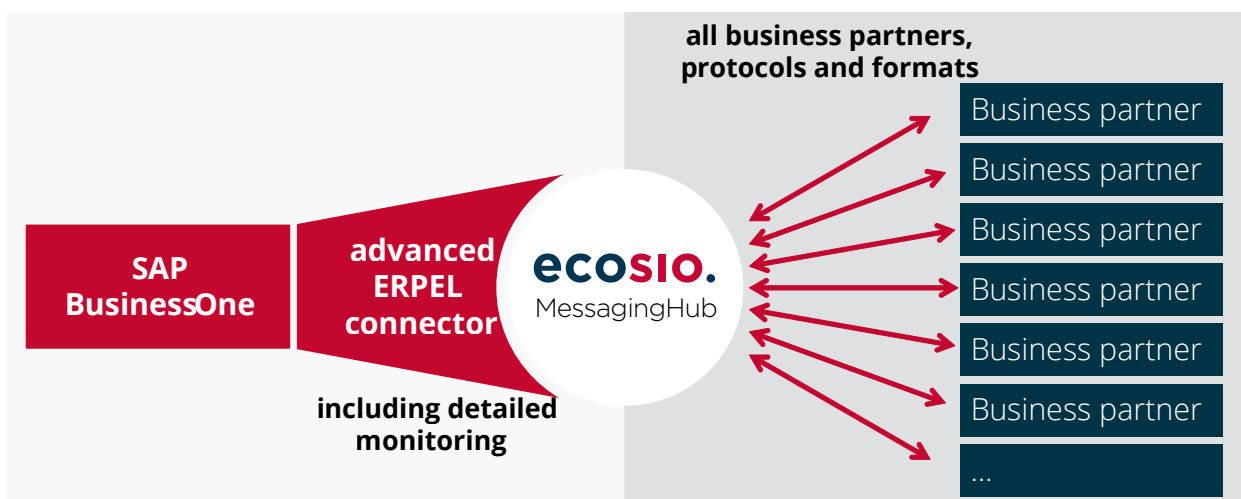

Business One with full EDI functionality

ERPEL (ERP Exchange Language), ecosio's most important EDI innovation, makes the integration of ERP systems simple – thanks to direct integration, one standardized transmission channel, and a unified document format. ecosio provides a REST-API that connects ERPEL to the ERP system and integrates its complete functionality in the ERP user interface – making it 100% EDI ready.

advanced EDI for SAP Business One – one standardized solution for EDI interchange with all business partners using ecosio.ERPEL

Together, SAP customizer advanced Business Consulting GmbH and ecosio have created a connector to integrate ecosio's innovative ERPEL interface into SAP Business One enterprise software for SMEs. The connector not only enables the automatic transmission of electronic documents in a unified XML format, but also permits ongoing delivery monitoring by ecosio.

End-to-end monitoring in the SAP user interface

The cooperation between ecosio and advanced enables integrated sending and receiving of EDI messages directly from SAP, all the while permitting the end-to-end monitoring of EDI messages in the SAP Business One user interface for the first time.

All data is exchanged using a connection to the ecosio.MessagingHub, and delivery status in SAP is updated to reflect every message sent. The SAP user receives real time confirmation that a sent message has been received by the recipient.

This is all made possible by integrating ecosio's API interface in SAP Business One, which enables full EDI functionality for SAP. The SAP Integration Framework is used for communication with the SAP environment, thereby reducing the amount of EDI adaptation needed to match ERPEL data fields with existing Business One fields. Standard fields are automatically assigned.

This innovative approach makes the SAP Business One System 100% ERPEL compatible and 100% EDI ready in about two business days.

About ecosio

ecosio is an all around EDI provider that is ideally prepared for Industry 4.0 and flexible supply chain management. ecosio makes it possible for enterprises of all sizes to continually optimize their business processes. ecosio's products grow along with client requirements, always remaining user friendly, cutting-edge, and cost-efficient. The ecosio team has been extensively involved in the development of EDI for several years and plays a leading role in national and international standardization projects (ebInterface, UN/CEFACT, etc.).
