

## ecosio.EDI

### Routing & Conversion

ecosio.EDI offers cloud-based managed EDI services. All of your EDI needs can be fulfilled and all business partners reached with just one connection to the ecosio.MessagingHub. Messages are converted to the desired format at the ecosio.MessagingHub and then transferred to the recipient – and vice versa. ecosio manages the EDI partner connection, from initial setup to the maintenance of various protocols (AS2, X.400, SFTP, OFTP2, SMTP or Web-Services) and documents.

#### Why EDI with ecosio?

ecosio experts are always available to develop concepts and solve problems. Highest quality personal support is our trademark, and quick reaction times and utmost dependability are a given.

ecosio.EDI clients can rely on ecosio to manage the complete set-up of EDI connections, administration, and central monitoring. A company can be connected to its business partners using AS2, X.400, SFTP, OFTP2, SMTP or RESTful API. If none of these solutions is possible, the EFEX client can be installed locally to create the connection to ecosio.MessagingHub.

### We offer

- » One connection for all EDI partners
- » Cloud-based managed EDI services
- » Worry-free EDI partner connection, from initial approach to maintenance

#### Routing – the navigation system for your messages

Let us worry about your business partners' transmission protocols. The company always sends and receives messages using the same connection. We pick up and deliver messages – and the ecosio.Monitor makes it possible to check on the status of every one of them.

#### Conversion – We speak every language

In addition to routing, ecosio can also manage message conversion. The company sends all messages to the ecosio.MessagingHub in the same document format, and incoming messages to the company are always forwarded in the same format, as well. ecosio.MessagingHub takes care of format "translation".

### **Digital signature – There is only one original**

If a business partner requests a signature on an EDI message, or if a signature is required according to local legislation, ecosio.MessagingHub can furnish an appropriate signature for all messages. Message signature guarantees authenticity of origin and the immutability of message contents.

### **Archiving – Your data is in good hands**

By default, messages are stored for at least three months on the ecosio.MessagingHub. On request, the message storage period can be prolonged.

## **Advantages**

- » Highly automated solutions based on EDIFACT, VDA, XML, CSV, fixed-length-text
- » Professional and personal client support from ecosio experts
- » 24/7 end-to-end monitoring by ecosio and proactive information in case of system error
- » Simple connection for small sub-suppliers, for example using ecosio.Web
- » High reliability thanks to redundant systems and daily system checks
- » Pay-per-use and low entry costs
- » Large savings potential in comparison to existing X.400 contracts
- » For companies of all sizes – products grow along with client requirements
- » No special EDI know-how necessary

### **ecosio.Monitor**

The ecosio.Monitor enables real time end-to-end monitoring of all incoming and outgoing EDI messages.

#### **ecosio.Monitor functions**

- » Clear and concise overview of the status of all sent and received messages
- » Message archive with individually determined storage periods
- » Full text searches in all sent and received documents
- » Download function allowing local processing
- » User management with an unlimited number of users
- » Flexible message statistics with graphic portrayal of message flow
